

[Help][Bug]Unable to post content from blogger

Posted by airy - 2010/09/28 20:26

I downloaded today the trial and updated to the latest build (Version 2, revision 5xx) and I am running it on Windows 7.

I managed to make it work on a test blog I created and is posting perfectly some content from article directories.

My problem now is publishing content from other blogger blog's rss. I get all the posts, I select them and whenever I click to post is either stuck in Uploading Image or Posing: feedname:blogname.

The rss url i use from blogger are this format: <http://www.blogname.com/feeds/posts/default?alt=rss>

I tried some basic troubleshooting myself with no success. Tried to start a new blog, delete the data from folder etc but still no success.

So, the software is stuck at posting process?

You're trying to post to WordPress or Blogger?

Regards,
Carty..

Hi Carty,

All of my tries are on blogger.
