

An AutoBlogging Software Fix

Posted by 2bealive - 2011/12/17 00:26

I've been having a constant Invalid Activation problem with ABSW. Tonight I got it fixed.

Here's how. I downloaded a new ABSW zip file. I clicked to open and install. It came back with I need to install the MS .NET 3.5 platform. the install program asked if I wanted to install the .NET 3.5 program. I clicked YES.

It went out and downloaded and installed the .NET 3.5 program.

I then installed the new ABSW zip program over the old ABSW program.

I clicked the Desktop icon and, are you ready for this; B) The ABSW opened and in the upper right corner was the 'Registered Version' words. :silly:

Here's the link to the MS .NET 3.5 Framework It's a free MS install.

It fixed my ABSW so its 's worth a shot.

Anyways, good luck with ABSW.

RT... B)
